

Assignment – 4

- Import the Customers.csv into your Database: click [here](#).

Write a Query to:

1. Print the entire table in the output.
2. Count the number of cities in the table (DISTINCT is to be used while counting or not? - Think).
3. Get the number of citizens from each city.
4. Get the number of citizens from each state.
5. Get the number of citizens across each city and state.
6. Get the number of citizens across each Country.
7. Get the number of citizens across each city, state, and country.
8. Get the output of the above query in descending order of the Number of citizens.
9. Get the city and state combinations with less than 3 citizens.
10. Get the output of the above query in reverse order of city names.
11. Get the number of citizens from each country whose pin code lies between 500000 and 600000.
12. Get the number of citizens from each country whose names start with M.

Note: Take all codes in .pdf format and send them to the WhatsApp group.
